

What makes ReadyMode's predictive dialer so fast?

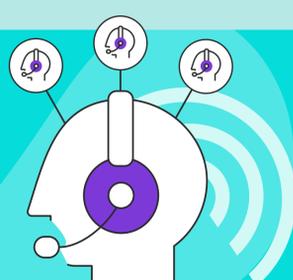

Predictive dialer software has disrupted today's sales landscape, and the timing couldn't be better. With capped dialing speeds, expensive usage rates, and prospects that would prefer to begin their sales journeys on a website rather than a cold call, telemarketers are dealing with a range of challenges that can only be solved by smarter technology.

But not all predictive dialers are created equal. From its intelligent automation to its user-friendly design and unparalleled speed, **ReadyMode's** predictive dialer is in a whole other category.

Predictive dialers aren't just a new solution — they're a new necessity.

Let's take a peek under the hood to see why it's such a turbo-charged engagement engine.

It begins when an agent places an outbound call — or outbound calls, plural, because ReadyMode's predictive dialer supports up to 12 lines per agent.

It's as if you have a fleet of sports cars on a racecourse...

And the competition has a single clunker on a dirt road.

This is a major differentiator, as no other solution on the market can match this volume.

Traditionally, providers will make you pay for additional lines, which means you need to invest more money — and then invest in more agents to handle them.

So while other companies have to stop every few miles to fuel up, you have an ultra-efficient engine that runs nonstop on a single charge.

These time and cost savings are made possible by industry leading automation and intelligent data analytics.

Not only does this increase speed, but dynamic lead targeting means that all outbound calls are serving a strategic purpose, maximizing the chance of connecting with credible prospects.

You get to travel a lot further and a lot faster when the whole machine has been built for speed from the beginning, instead of upgraded bit by bit over time.

ReadyMode's predictive dialer's speed comes from its unprecedented number of lines per agent and automation that helps you track and target your most credible leads. But there's more to it than that.

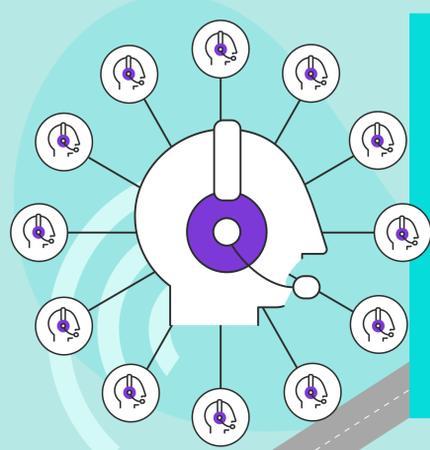

Its speed is also due to its user-friendly dashboard that allows managers to customize calls-per-agent ratios and call-abandonment thresholds.

These are robust automated speed controls that need to be handled responsibly. When you're driving an engine this powerful, you wouldn't want to rev it up on a residential street, especially if you've never taken it out for a spin.

Raising the speed too much might risk abandoned calls.

But with the option and flexibility, your sales team can find the pace that works best for them.

ReadyMode's predictive dialer brings in better results, faster. The combination of a customizable autodialer with 12 lines per agent, along with automated speed controls, means that agent talk time can be tripled — and users have improved their sales and marketing conversions by up to 300%.

What does that look like in distance? In the same amount of time it takes the competition to drive from San Francisco to Salt Lake City, you're getting to Green Bay.

The quick return on investment speaks for itself — and a fast ROI is just as fantastic as a fast predictive dialer.
